

Recommended installation setup for a 3/4 gallon EZ-Flo fertilizer injector (IEZH34)

This hose threaded setup features a 3/4 gallon EZ-Flo fertilizer injector and a *vacuum breaker at the spigot. To automate the system, insert a timer between the spigot and vacuum breaker. If clogging becomes an issue, install a second filter after the fertilizer injector coupler.

*Backflow prevention devices prevent contaminated water from siphoning back into your clean water supply and are usually required by local code.
